Koren Specific Technique  
Childhood vaccination, Cancer, Autism and chiropractic  

Dr. Stuart E. Hoffman, DC, FICA  

Course Description  
The course objective is to teach the latest clinical and scientific research. The purpose is to improve doctor’s knowledge and give them more tools to understand and help their patients. Doctors of Chiropractic need more precise and effective ways to locate and correct subluxations; to understand cancer and chronic illness. Participants may take part in demonstrations and learn things to do in their practice Monday morning.

4 Hours Technique  

HOUR 1  
Clinical Science  
Toxicity, trauma and thoughts and how they relate to current research in chronic illness.

HOUR 2  
Clinical Science  
Toxicity, trauma and thoughts and how they relate to current research in chronic illness.

HOUR 3  
Examination Procedures/Diagnosis.  
The subluxation as a metaphor for clinical findings relating to interference, imbalance, disturbance and disconnection. Discussion and demonstration of binary biofeedback devices as they have been used in chiropractic to locate subluxations, examine the body and arrive at a diagnosis or clinical finding.

HOUR 4  
Adjustive Technique  
Discussion of chiropractic techniques and how it relates to an overall health care system. Koren Specific Technique (KST) as a synergistic protocol of various concepts in Adjustive techniques and clinical findings will be demonstrated.

Note: KST is not a chiropractic technique but a diagnostic protocol that may be used by healthcare systems.
• Who is protected when utilizing an ethical informed consent
• Malpractice claims: when a complaint is filed, how informed consent supports the legal ethics of the physician patient relationship.
• The ethics of informing a patient of the non-common risk of stroke in an informed consent.
• How do we implement an ethically sound informed consent?
• Ethical physician-patient communication strategies for informed consent.
