**Course Description**

The objective of this course is to teach clinical competency in evaluation, examination and care of the 0-4 year old.

The purpose of this course is to teach and clarify the application and outcomes of subluxation based chiropractic care. In addition, to familiarize attendees with commonly encountered problems and chiropractic solutions to help them be more successful in the care of their young patients.

This course will provide the tools for one to competently and effectively evaluate, examine and care for children from birth to age four. We will review methods for recognizing the signs of developmental disorders in the first few years of life and establish an overview of chiropractic solutions. We will also discuss common health problems of this age group and chiropractic care vs. traditional medical care. A strong emphasis will be placed on practical solutions and implementation.
